

# Our Story

*We believe the future is energy-optimized.*

At Qoitech, we are ardent about long-lived products. We strive to make the most effective developer tools for energy optimization, battery testing and predictive battery life analytics, regardless of industry. By enabling ease of use, our products help developers and engineers throughout the stack to develop for longer battery life, shorter development cycles and lower maintenance cost. But foremost, we provide our customers with the most cost-efficient tools, the know-how, and the inspiration to do what is right – to put energy-efficient and long-lived products on the market that utilize the energy sources fully. With every progress our customers make, we are getting closer to our vision of an energy-efficient future.

We began our journey in 2017 as a subsidiary of Sony Mobile Communication and spun out with a small team in 2019. Quality is a heritage and of the essence for us, as it is for our growing number of customers from 60+ countries, from small product and design companies to Fortune 500 companies.

*"Our products are designed with sustainability, reuse and configurability in mind."*

What makes Otii unique and a compelling solution for our customers is also what makes it sustainable. The best design is always the one where sustainability is the natural by-product. Design and made in Sweden.
